

The Lavergne Group

“We produce the highest quality engineered resins from post consumer and postindustrial recyclable plastics”

Our mission is to help our customers grow their businesses by providing sustainable plastics solutions that create value for them and their customers.

We integrate our competencies in sustainable plastics products and plastics processing solutions to help better utilize plastics resources.

Our strength is innovation.

Plastic from HP inkjet cartridges back into HP inkjet cartridges: rPET

“HP’s use of recycled plastic in an application as technically demanding as their inkjet cartridges represents an unprecedented engineering innovation.”

Larry Koester
VP Communications, Environmental Division
Society of Plastics Engineers

Recycled plastics can be used in critical and highly technical applications with the same level of reliability than prime resins....

Demand for recycled materials is increasing – more and more companies need to secure recycled materials as raw materials for the future & meet their corporate sustainability objectives

Closed Loop Processes are one way to reduce plastics waste (to land fills, environment) and secure the materials needed to recover / recycle the value from used plastics.

The use of renewable resources benefits us all ...
